

# Defigo Access System

The access system to the apartment blocks in St. Olav will be upgraded with a new Defigo system. The installation will start January 15<sup>th</sup>.

The access system requires the installation of the Defigo app on your mobile phone. If you have already communicated the below information to the janitors, you will receive an onboarding mail from Defigo with your user name and password which you use to access and administer the system. You can then enter your name which will be shown on the Defigo panel at the entrance door.

When a visitor calls from the call panel at the entrance door, you will be able to communicate with the caller and also see the person on your mobile phone. You can open the entrance door on the ground level by applying the door icon on your mobile.

The entry door on the ground level may also be opened with an access chip. Hold the chip against the access panel next to the entry door and the door will open without the use of your key. The janitor will provide you with the chip.

To give you access to the system, we need the following information for each occupant of the apartment.

If the below information has not been communicated to the janitors, you will not be able to access the system.

Name :

E-mail :

Mobile no :

Street no :

Apartment no :

Please e-mail the above information to : [st.olav@Hesbynett.no](mailto:st.olav@Hesbynett.no)

You may also fill in the above requested information on this sheet and leave it in the mail box at the janitors' office near the petrol station.
